Product Require Document of a 3D Interactive Website

Introducing the 3D Object

O1. What's the 3D Object you would like to introduce? Please describe it within one paragraph.

The 3d object we have chosen is a 1989 Nintendo Gameboy. It has a game card in the back; it is a yellow special Pikachu edition version of Pokémon. The game boy shows obvious wear and tear, including detailed scratches on the screen and the hard plastic casing.

O2. Please describe the 3D Object within a sentence.

Retro and vintage video game console from the late 80's.

O3. What's the most important 3 features of this 3D Object?

- The screen
- The control buttons
- The game cartridge

O4. What's the Call to Action (CTA) of viewing the website?

Promote the 3d object for purchase by the viewer.

Website Implementation

I1. Please describe the branding elements (Typography, Colour Scheme) for promoting this 3D Object.

- Colour Scheme
    - Bright colours: red, blue, yellow and occasional pink and green
    - Black background
- Pixelated
- Retro bold typography – Silkscreen (google fonts)

I2. What the audience should see when **launching** the website?

The product will be the first thing you see, centred in the middle and big. Captioned information slightly under layered below the Gameboy to give the 3d effect. Pixels following the mouse as seen in https://oumahi.art/index.html .

I3. How to introduce the **1st** feature of this 3D Object? In what design layout? How will the user interact within this section?

Rotatability – The 3d object will be able to be rotated by the user so they can get the full 360' view by clicking and holding the mouse button.

I4. How to introduce the **2nd** feature of this 3D Object? In what design layout? How will the user interact within this section?

Hover effect – When the object is hovered over by the mouse cursor it will increase in size and have a small outer glow to highlight the product even more.

I5. How to introduce the **3rd** feature of this 3D Object? In what design layout? How will the user interact within this section?

Scroll wheel – this will also take you down the page but as well as that, it will explode the 3d object so that it shows the inside of the object as if it was being taken apart. And then it gets put back together before the final page.

I6. How to instruct the user to complete the CTA when they scrolled to the end of the website? In what design layout? How will the user interact within this section?

The user interacts with the object by using the mouse and when you have scrolled to the end it says "Available Now" and a button saying "Buy It Now" .
